CHAS App Guide

Child Health Assessment System: every page, every window

This guide explains, in plain words, what is on each page of CHAS and what each pop-up window (dialog) is for. It is written for the group, so everyone can explain and demonstrate any part of the system during the defense.

No technical knowledge is needed to read it.

Version 0.7.3 · October 2026

16. How a school year flows in CHAS

1. Who uses CHAS

CHAS runs on **one computer** at the school and works **without internet**. There are two kinds of accounts:

- **School Head:** sees everything and also manages the system: staff accounts, backups, the school year and school settings.
- **School Nurse:** does the health work: weighing learners, invitation slips, parent meetings and the SF8 report.

Page	School Head	School Nurse
School overview / Health overview	Yes	Yes
Learners	Yes	Yes
Weigh-in	Yes	Yes
Invitation slips	Yes	Yes
Meeting attendance	Yes	Yes
SF8 export	Yes	Yes
Roles	Yes	No
Backup and restore	Yes	No
New school year	Yes	No
School settings	Yes	No
My account	Yes	Yes

2

Signing in

Used by: **everyone**

> The first screen when CHAS opens. Staff type their username and password to get in.

What is on the page

- The CHAS logo, the school name and the current school year.
- **Username** and **Password** boxes, with an eye button to show or hide the password.
- **Sign in** button.
- **Forgot password?** link.

SCREEN **Reset password (Forgot password)**

For someone who forgot their password. They type their username, one of their **recovery codes**, and a new password. Each recovery code works once. If they have no codes left, the School Head can reset the password from the Roles page.

SCREEN **Set a new password**

Appears on the first sign-in with a temporary password (the starting password, or one the head just set). The person must choose their own password of at least twelve characters before continuing.

REMINDER **Set up account recovery**

A reminder that appears after signing in if the person has no recovery codes yet. **Create recovery codes** makes eight codes to print or write down. **Remind me later** closes it. A yellow strip at the top of the app also reminds them until codes are made.

3

The side menu

Used by: **everyone**

> The blue panel on the left. It lists the pages the person is allowed to use, grouped by what they are for.

- **School** (head) or **Health** (nurse): the overview page.
- **Measure:** Learners and Weigh-in.
- **Advise:** Invitation slips and Meeting attendance.
- **Report and manage** (head): SF8 export, Roles, Backup and restore, New school year, School settings. The nurse sees only SF8 export here.
- At the bottom: **My account** and **Sign out**.

- The arrow on the menu's edge folds it down to icons for more space.

At the top of every page: the page title, a one-line hint saying what the page is for, and the signed-in person's name and role.

4

School overview and Health overview

Used by: **School Head** (School overview) and **School Nurse** (Health overview)

> The home page after signing in. It shows the school's nutrition situation at a glance, so the user knows what needs attention today.

School overview (School Head)

- **Banner** with the school name, the school year, the number of learners and sections.
- **Nutritional status by grade:** a chart showing how many learners in each grade are Normal or in each problem group.
- **Sections table:** every class with its number of learners, how many are measured, how many are Normal, how many need monitoring, and how many still need parent follow-up.
- **Weighed so far:** a half-circle gauge of how many learners have been measured in the current weigh-in.
- **Nutritional status:** a ring chart of the whole school by group (Normal, Wasted, Severely wasted, Overweight, Obese).
- **Parent follow-up:** how many parents were invited and attended, and the next parent meeting.

Health overview (School Nurse)

- **Calendar** with upcoming events such as the parent meeting.
- **Priority cases:** the learners who need help most, such as severely wasted, severely stunted, obese, or both wasted and stunted. Filter buttons narrow the list by condition, and each learner opens their profile.
- **Need monitoring by grade:** bars comparing each grade with the school average.
- **Growth monitoring:** how the share of learners needing monitoring changes from one weigh-in to the next.
- **Parent meeting card:** the date, time and venue of the next meeting.

Demo tip: start the demo here. It answers "How healthy is our school right now?" in one look.

5

Learners

Used by: **School Head** and **School Nurse**

> The list of every registered learner. From here you add learners, find a learner, and open their full health record.

What is on the page

- **Tabs** across the top: All, Needs follow-up, Not measured, Normal, and **Former learners** (graduates and learners who transferred out or dropped). Each tab shows how many learners it holds.
- **Search box:** find a learner by name or LRN.
- **Grade filter:** show one class only. New classes appear here even before anyone is enrolled.
- **View switch:** learner **cards** (nine per page) or a **table**.
- **Add learner** button.
- Each **learner card** shows the name, sex, age, class, BMI, nutritional status, last measured date and whether the parent was invited. Clicking the card opens the learner profile.
- **Quick look** (chart button on a card): a small pop-up with the learner's growth at a glance and shortcuts to measure or invite.

DIALOG Add learner (4 steps)

1. **Learner:** LRN, last name, first name, middle name, extension, sex and date of birth. The age is worked out by itself.
2. **Class:** the year level and section, and the enrolment status.
3. **Immunization:** the vaccines on the child's card (vaccine, dose, date given, status, remarks).
4. **Health history:** existing conditions (with status and treatment) and health notes. Optional.

When saved, a confirmation shows the learner's new **Stub ID**, which is used later on the invitation slip.

DIALOG Import from spreadsheet

Inside Add learner. Registers a whole class at once from the school's SF1 list (Excel or CSV file). Choose the class and the file, check the preview, then import. Learners already registered are skipped and listed as "Already registered".

5

The learner profile

Opens when you click a learner anywhere in the app

> One child's complete health record on one scrolling page. The top shows the school year at a glance; the lower part, "Record details", shows everything in detail.

Top strip

- "Learner health record", the school and school year, with **Print record**, **Edit** and close buttons.

School-year journey (top part)

- **Name header:** initials, full name, class, adviser, Stub ID, and coloured labels for the BMI and height status.
- **School-year line (June to May):** each weigh-in as a dot (Baseline, Follow-up, Endline) with its date and weight, the slip printed and parent attended dates, a yellow mark for today, and the Endline still to come.
- **Four boxes:** height, weight (and change since the first weigh-in), immunization status, and the **next step** for this learner (for example "Print invitation slip" or "Endline weigh-in").

Record details (lower part)

- **Particulars:** LRN, date of birth, sex, age, year level and enrolment status.
- **Nutritional status:** two scales (BMI-for-age and Height-for-age) showing where the learner sits on the coloured bands; four figures (weight change, height change, BMI z-score change, weigh-ins this year); and every weigh-in with its **nurse's note** and who recorded it. **Show growth charts** opens detailed growth charts and the list of every save and correction.
- **Invitation:** three steps: For follow-up, Slip printed, Parent attended, with dates and the meeting details.
- **Health history:** each condition with its status (Active, Recurring, Resolved), treatment and notes.
- **Immunization:** how many recorded doses were given, and the full vaccine table.

Bottom buttons

- **Print invitation slip** (or View slip) and **Record measurement** (or Correct measurement), which jump to those pages for this learner.

MODE Edit

Turns the profile into a form to correct the learner's details, class, health history and vaccines. A yellow strip says the record is being edited. **Save changes** or **Cancel**. Closing without saving asks first, so nothing is lost by accident.

DIALOG Print record

A preview of the learner's printable health and nutrition record (with the DepEd heading and signature lines for the nurse and head), then print or save as PDF.

6

Weigh-in

Used by: **School Head** and **School Nurse**

> Where heights and weights are entered. CHAS calculates each learner's nutritional status the moment the numbers are typed.

The list

- The current round at the top: **Baseline weigh-in** (June to December) or **Endline weigh-in** (January to May). It changes by itself based on the date.
- Tabs: **To measure**, **Measured** and **Absent**, with counts.
- Grade filter and a search box.
- Each row: learner, grade, sex, age, last measured, height, weight, status, and a **Measure** or **Re-measure** button.
- **Start follow-up** link (see below).

The weigh-in station (after choosing a learner)

- **Measuring on:** the date of the weigh-in (today by default). **Change** lets you enter a past session.
- The learner's name, class, sex and age, and a button to open their profile.
- **Height** and **Weight** boxes. A warning appears if a number looks mistyped.
- A live result showing the **BMI-for-age** and **Height-for-age** status, with the z-score.
- **Note (optional):** context for this weigh-in, for example "Recovering from dengue, weight loss expected". It is shown on the profile and never changes the result.
- An alert if the status changed since the last measurement (for example Normal to Wasted).
- **Save and next** moves straight to the next learner. **Absent** marks the learner absent for that day.
- A **Growth** panel showing the learner's earlier readings.
- The queue on the right shows who is next and who is done.
- After saving, a message appears with **Undo**.

DIALOG Replace the saved measurement?

Appears when correcting a weigh-in that was already saved. It shows the old and new figures. The old figures are kept in the record's history.

DIALOG Follow-up weigh-in

Starts an extra weigh-in, outside Baseline and Endline, for learners who need monitoring (measured and not Normal). Only those learners appear in the list while it runs. It does not erase anything. **End the follow-up weigh-in?** stops it.

7

Invitation slips

Used by: **School Head** and **School Nurse**

> Prints the letter that invites the parent of a learner who needs monitoring to a parent meeting. Each slip has a tear-off **stub** with the learner's Stub ID.

What is on the page

- **The slip preview** on the left, exactly as it will print, with arrows to page through the selected slips.
- **The list** on the right, with three tabs: **Not invited**, **Invited** and **Attended**. Learners still to invite start ticked. Ticking an invited learner prints a **reprint** (for example when the slip was lost); it keeps the same Stub ID.
- Filters by grade and by nutritional status.
- The **parent meeting** chip at the top (date, time, venue) with **Edit**.
- **Print** and **Save as PDF** for the ticked slips. Printed learners move to Invited.

DIALOG **Parent meeting**

Sets the date, time and venue printed on every slip. If slips were already printed for the old meeting, CHAS asks before changing it and suggests reprinting those slips.

DIALOG **Slip wording**

Edits the slip's title, message, closing and the signer's name. A preview shows the result, and a warning appears if the text is too long to fit.

8

Meeting attendance

Used by: **School Head** and **School Nurse**

> Records which parents attended the meeting. The parent hands over the stub, and the nurse types the Stub ID.

- **Stub ID box** and **Record attendance**. It opens only on or after the meeting day.
- A result card: **Attended**, **Already recorded**, **Meeting not yet held**, or **No invitation found**.
- **Stub lost? Find by name:** search an invited learner by name or LRN and record attendance without the stub.
- **Meeting history:** every past meeting with how many invited parents attended. Clicking one lists who attended.

9

SF8 export

Used by: **School Head** and **School Nurse**

> Produces DepEd's School Form 8 (Learner's Basic Health and Nutrition Report) for each class, filled in from the weigh-ins.

- **A tab for each class.** A tick means everyone is measured; a number shows how many are still not measured.
- The class table: name, birth date, age, weight, height, BMI, BMI-for-age and height-for-age, males first then females, as on the official form.
- **Print** a working copy, and **Export PDF** of the official form.

DIALOG **SF8 preview**

Shows the finished SF8 form before saving: school details, the learners, the "NOTHING FOLLOWS" line and the summary table. Then save it as a PDF.

10

Roles (staff accounts)

Used by: **School Head only**

> Manages who can sign in to CHAS.

- The list of accounts with name, role, last signed in and status, plus search and a filter (All, Active, Switched off).
- **Switch off** stops an account from signing in (CHAS asks first; the records are kept); **Switch on** lets it back in.

DIALOG **Add an account**

Name, username, role (School Head or School Nurse) and a first password, which the person must change when they first sign in.

DIALOG **Edit account**

Changes the name, username or role of an existing account.

DIALOG **Set a new password**

The head resets a staff member's password when they are locked out.

11

Backup and restore

Used by: **School Head only**

> Keeps the records safe.

- What is on file: the number of learners, accounts and measurements.
- **Automatic backup:** the date of the last one. CHAS saves a copy by itself every time it closes (one per day, the last seven days) on the same computer.
- **Back up now:** saves a full copy to a folder you choose, ideally a **USB drive** kept away from the computer.
- **Restore a backup:** replaces the records on this computer with a backup. CHAS keeps a copy of the current records first and restarts with the restored ones.
- Both ask for the password first.

12

New school year

Used by: **School Head only**

> Closes the current school year and moves every learner up one grade.

- The current school year and a checklist of steps before closing it: complete the endline weigh-in, export the SF8 for each grade, back up the records.

DIALOG **New school year (4 steps)**

1. **Which school year is next?** Filled in automatically.
2. **Who is not moving up?** Everyone is promoted unless marked **Retained**, **Transferred out** or **Dropped**. Learners in the last grade are marked **Completed** and move to Former learners.
3. **Classes and advisers:** which section each class moves into, and the advisers for the new year.
4. **Ready to start:** the totals, and the new year typed to confirm.

It can be undone until records are added in the new year.

13

School settings

Used by: **School Head only**

> The school's own details, used on the SF8, the slips and the printed records.

- **School details:** school name, School ID, district, division and region.
- **School logo:** upload the school's logo for the slips and the learner record.
- **Year levels and sections:** add, rename and reorder year levels (for example Kinder, Grade 1 to Grade 6), and add sections with their advisers. The order of the list is the grade order, so Kinder must be at the top. A level or section can be removed only if no learner record uses it.

DIALOG **Year level / Section**

Small windows to add or rename a year level, or to add or edit a section (name, year level, adviser).

14

My account

Used by: **everyone**

> The signed-in person's own account.

- **Account details:** name, username, role and what the role can access.
- **Password:** change the password (current password, then the new one twice).
- **Recovery codes:** create a new set of eight codes to print or write down. They are the way back in if the password is forgotten.

15

Words used in the app

Word	Meaning
LRN	The learner's 12-digit DepEd Learner Reference Number.
Baseline weigh-in	The first weigh-in of the school year (June to December).
Endline weigh-in	The second weigh-in (January to May), to see if learners improved.
Follow-up weigh-in	An extra weigh-in only for learners who need monitoring.
BMI-for-age	Weight compared with height, for the learner's age and sex (WHO standard). Groups: Severely wasted, Wasted, Normal, Overweight, Obese.
Height-for-age	Height compared with other children of the same age and sex. Groups: Severely stunted, Stunted, Normal, Tall.
z-score	How far a learner is from the average child. Between −2 and +2 is Normal.
Need monitoring / For follow-up	Measured and not Normal. These learners get an invitation slip.
Invitation slip	The letter inviting the parent to a meeting about their child's nutrition.
Stub ID	The code on the slip's tear-off stub, typed in when the parent attends.
SF8	DepEd School Form 8, the official health and nutrition report per class.
Former learners	Learners who graduated, transferred out or dropped. Their records are kept.

16

How a school year flows in CHAS

1. **Set up** the school details, year levels and sections, and staff accounts (School settings, Roles).
2. **Register learners** one by one or by importing the SF1 list (Learners).
3. **Baseline weigh-in**: measure every learner; CHAS classifies each one instantly (Weigh-in).
4. **Invite parents** of learners who need monitoring: set the meeting and print the slips (Invitation slips).
5. **Record attendance** at the parent meeting using the stubs (Meeting attendance).
6. **Follow-up weigh-ins** for learners being monitored, with notes when needed (Weigh-in).
7. **Endline weigh-in** from January, then **export the SF8** for each class (SF8 export).
8. **Back up** to a USB drive and **start the new school year** (Backup and restore, New school year).

CHAS does not diagnose. It applies the same WHO standard DepEd uses to every learner, keeps the health history and notes beside the result, and leaves the judgment to the nurse.
